

# Unlock your SAP Data with Qlik for Hyperscalers

Accelerate Data Delivery and Actionable Insights

## Challenges

# Data Value Trapped in SAP?

Access to your SAP data is fraught with challenges. Barriers to access, replication, migration or analysis can reduce your most valuable asset to a nearly meaningless liability. Government departments, agencies and public bodies realise that their SAP data allows them to do more than 'just' run their operations – and they want to use their SAP data to improve public services, drive efficiency and reduce cost.

But integrating and enriching SAP data in real-time can be complex, time-consuming and expensive – effectively blocking the data's value, and ensuring SAP lock-in, when using SAP proprietary solutions.

## The Qlik Solution

# Powerful Data Integration and Analytics for SAP

### Quickly Get SAP Data onto your Cloud Platforms

SAP-certified Qlik solutions bring best-in-class technology to SAP data-constrained organisations. They help to drive delivery, automation and cataloguing of live SAP data wherever it's needed, no matter the Cloud Provider.

Qlik Data Integration (QDI) gives your organisation mastery over SAP architecture, complex SAP data structures, and native SAP impediments to data ingestion, replication, transformation and cataloguing. You'll gain the capability to access data from any SAP module, as well as HANA, and automate real-time change data capture (CDC) and bulk data loading.

Qlik's highly mature integration capability enables continuous data integration and consolidation from a wide variety of database sources – including mainframes, SAP and more – to your public cloud platforms. So your organisation can always access ready-to-use data.

### Easily use SAP Data on Hyperscalers

Qlik Data Analytics (QDA) empowers organisations to discover, understand and act on hidden insights within their SAP data. Built on Qlik's unique Associative Engine, it supports a full range of users and use cases across the lifecycle from data to insight. These include self-service analytics, interactive dashboards, conversational analytics, custom and embedded analytics, mobile analytics and reporting.

Qlik Sense augments and enhances human intuition with AI-powered insight suggestions, automation and natural language interaction. Qlik Sense is a governed SaaS/cloud native architecture that offers trust, scale and ongoing choice for your organisation. It sets the benchmark for third generation analytics platforms, empowering everyone in your organisation to make data driven decisions.

# Benefits

Qlik empowers data strategists, technologists and users by integrating SAP data and supporting related analytics.

## Access near real-time data

If any data changes within SAP, Qlik's Change Data Capture (CDC) technology immediately replicates this information to your cloud(s), enabling your teams to always work with up-to-the-minute data.

## Gain the flexibility to combine and analyse SAP data with other sources

The unique Qlik Associative Engine understands all the relationships between multiple disparate datasets, whether they are SAP or from other sources, to expose hidden insights that would otherwise be missed by query-based tools.

## Expand data availability

Replicate, synchronise, distribute, consolidate and ingest data – not only from SAP but across all major databases, data warehouses and Hadoop, both on premises and in the cloud.

## World-class, modern analytics for everyone

Qlik Sense delivers analytics to everyone – from executives to analysts and casual users – in a secure and governed way. Explore, analyse, create and collaborate on SAP data using any device anywhere, anytime there is a question.

Choose Qlik solutions from Data Technology and benefit from our 30+ years' experience helping some of the world's best-known organisations to solve their toughest data challenges.
